Carefree at home

The greatest wish of many elderly people is to live independently at home for as long as possible. VieDome by TKH Care Solutions can help you to fulfil that wish. For example by providing efficient visual communication or by offering convenience, comfort and care services.

Professional

When clients or residents need daily care, VieDome by TKH Care Solutions can be of significant value. VieDome helps you to create numerous possibilities to simplify care tasks and to give your full attention to your client. Tailor-made care, pluriformity and optimal adjustment to the changing need and request for care.

Enjoy life

There are more and more fit elderly people, who also have increasingly high standards for their living environment. In general they can fall back on a good pension. This makes fit senior citizens an interesting target group, whom you can offer a safe and comfortable living environment with the use of VieDome by TKH Care Solutions.

VieDome by TKH Care Solutions A suitable answer to a changing world

The world is changing rapidly. When we look at the Netherlands, we see how its population is aging at an increasing rate and life expectancy continues to rise. At the same time there are more and more chronically ill, whilst the supply of traditional care is ever-decreasing. These social developments have far-reaching consequences, also for housing and care. With VieDome by TKH Care Solutions you can provide an efficient answer to these consequences.

New solutions

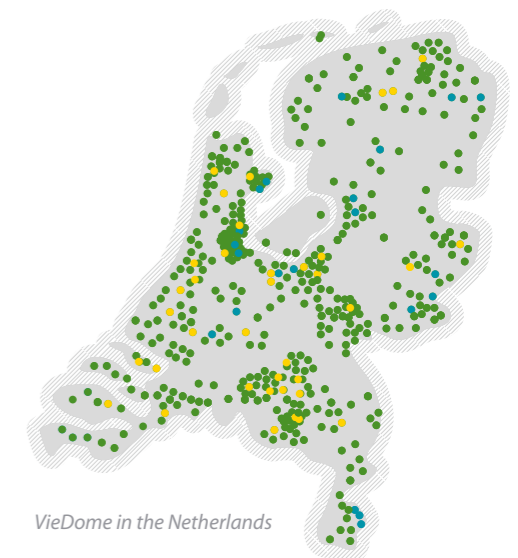

There is an increasing need for new solutions in the areas of care, safety and comfort. Solutions that ensure that care is more efficient, more attention can be paid to the client and that people can live independently and responsibly at home, under their own supervision. Solutions which also ensure a better quality of life. It is tempting to think that more money and more staff are the only solution to the current developments.

Familiar, trustworthy and safe

VieDome is a reliable and well-secured digital platform which is easy to use, also for people who are not so familiar with internet. The platform is secure, so users will never be approached by people or organisations which have not been screened by the facilitating organisation beforehand. The privacy of users is also guaranteed when using VieDome.

A proven and much used solution

At many locations in the Netherlands, TKH Care Solutions proves that the careful application of new technology can provide a real contribution to the challenges of our time. VieDome is broadly applicable in houses as well as in institutions and is different from other domotics systems in many ways. VieDome has a modular set-up and can therefore be implemented completely as desired.

VieDome in the Netherlands

Living independently at home for longer

Almost all elderly people wish to live at home independently for as long as possible. They often have been living in the same house for years, know the environment and buy their bread from the bakery at the end of the street. The social contact elderly people have in their direct environment is very important as well. There are, therefore, many reasons to support the elderly in their wish to stay in their own environment for as long as possible. VieDome can help you to fulfil that wish.

Communication through video communication

Being able to communicate with the environment in an easy way is crucial for living at home independently for as long as possible. Video communication is an ideal aid for this. Talking and seeing each other at the same time lowers the threshold and offers many advantages. Video communication can be done with children, family or friends but also with other affiliated parties such as the supermarket, bank, general practitioner, pharmacy, library and care centre.

Increase safety

The VieDome digital platform can really provide the support needed to ensure that elderly people can live at home comfortably, safely and responsibly for a longer time. That is why VieDome by TKH Care Solutions

offers extensive possibilities, besides video communication, to increase the safety of elderly people. Think, for example, of an intruder alarm, camera supervision, video intercom or opening the front door with the use of a remote control.

The demand for care is key

The possibilities VieDome offers are numerous and varied. You, as organisation, determine how you organise the platform, which parties are involved and which services are offered. The starting point is that the technique follows the demand for care. The technique is not decisive, but the care demanded by the resident is. This can vary from the ordering of a meal or having groceries delivered at home up to the measurement of vitals such as weight, heart rate, blood pressure and blood sugar and the sending of this data to care providers.

Innovative VieDome services thanks to ZuidZorg

In the vicinity of Eindhoven (the Netherlands), the work area of ZuidZorg, VieDome has been deployed on a large scale. Approximately 500 ZuidZorg clients have now been connected to the VieDome platform and that makes it the largest project for long-distance care in the Netherlands. The care centre in Veldhoven provides daily services using the VieDome technology.

ZuidZorg is one of the founders of long-distance care with the use of VieDome. ZuidZorg has been involved in the project from the beginning and has provided important input in the development of the content of the VieDome concept by developing innovative service for long-distance care.

Examples of services that have proven to be very successful are the good morning service, welfare button and the digital diabetes card. In addition, various other services are offered in the areas of communication, service and comfort, information and advice and safety. At this moment, ZuidZorg has the largest number of connected clients and is involved in many innovative projects in the area of long-distance care in home care.

Calling the care centre on your own TV with the use of video communication

The care centre checks whether everything is all right with the resident

One of the services VieDome has enabled: the dog walking service

Wander detection has made De Hagert an open community

A stone's throw from Wijchen (the Netherlands), on the edge of the historic village of Leur, residential care farm De Hagert is located. This is where demented elderly people or people with an intellectual impairment from the municipality of Wijchen and Land van Maas en Waal can receive 24-hour care and daytime activities and day-care.

Residential care farm De Hagert offers what others can only dream about: residents who can go independently and on their own initiative to the yard outside. Safely and responsibly thanks to the wander detection device of VieDome by TKH Care Solutions.

Hans Vos of ZZG care group sees De Hagert grow into an open community thanks to wander detection. "This is the way we always wanted it. Residents wearing a chip can independently go out into the yard. Here, everyone can walk around freely, our volunteers who work in the vegetable garden or take care of the animals with the residents as well. It is also meant to correct the wrong image often portrayed in the media, that demented persons are often bound and just waiting for their end."

Full attention for your client

Care policy and care vision are always changing, for the carer as well as for the person receiving care. The person receiving care is becoming more and more the focus; tailor-made care and the flexible supply of care are increasingly important. This requires other skills from the care providers. There is more and more demand for pluriformity, accompanied by creative and flexible care management. The attention for the client and flexibly adapting to new and changing care needs are key. VieDome can help you achieve this.

Tailor-made care

VieDome by TKH Care Solutions is the all-in-one care domotics system, combining advanced care options with broadband technology. Using this digital platform, you in essence create a virtual care institution, which enables elderly people, people with an impairment and persons requiring long-term care to remain at home in their own environment longer. VieDome ensures that the timing of care is mainly organised by the persons requesting care and the nurses. As a result, work can be done much more efficiently.

Possibilities for care institutions

VieDome is also extremely suitable for care institutions for elderly people and people with an intellectual impairment. For these institutions, there are options available such as acoustic monitoring, visual observation,

nurse call and wireless alarm. Monitoring options, such as personal alarms, wander detection, fire alarms and intruder alarms can also be realised with the use of VieDome. These functions help relieve the care tasks and result in more time and attention being spent on the client.

Easy and user friendly

VieDome ensures care is always at hand, whether the clients are located in an institution or at home in houses across a wide area. Moreover, VieDome helps to organise care efficiently, enabling effective care with a limited number of carers to more persons requesting care. The combination of technology and care services at VieDome aims to provide clients with a life that is as normal as possible, while having care always close at hand.

Easy living

Better healthcare and increased welfare have resulted in elderly people being fit longer, now and in the future. They also expect to live for longer than they did in the past. They live their life to the fullest and consciously choose a pleasant life style that goes well with convenience and comfort services. Thanks to their good pension, fit elderly people can afford this life and this makes them an interesting target group.

Safety and service

VieDome by TKH Care Solutions enables your organisation to offer fit elderly people the added value of a pleasant and safe living environment. For example: burglary and fire alarms, video intercom, virtual housekeeper services and the opening of the front door using a remote control. It also offers the opportunity to work with third parties, organisations and institutions that can help you provide a good source of information and more service with the use of video communication .

Easy does it

Fit elderly people today like to and often choose the convenience of a shopping service, dog walking service, gardener or household aid. Not because they are no longer active, but because they enjoy doing other fun things, such as visiting the theatre or museum, going on holiday and going out for dinner with friends.

VieDome enables your organisation to create a digital platform and is aimed at fit elderly people. By bringing about connections with external suppliers of convenience, comfort and possibly care services, a valuable network is created of suppliers which have been screened beforehand and are therefore reliable.

Communication and information

Besides offering convenience, comfort and care services through VieDome, the platform is also interesting for users in other areas. Video communication is a widely used application for calling children, grandchildren, family and friends. VieDome also offers interesting options in the area of news and information.

VieDome makes rental homes more attractive

People renting a home place increasingly high demands on their living environment. Living safely and comfortably plays an important role. Housing corporations wanting to offer added value to their tenants in this and other areas, are given numerous possibilities thanks to VieDome by TKH Care Solutions.

VieDome makes it easy to provide comfort and convenience services to tenants. VieDome also has extensive possibilities in the areas of safety, communication, information and care. Video communication - calling each other while seeing each other - is a good example.

Providing service and information through VieDome is very efficient and handy, for your organisation as well as for your tenants. VieDome is also suitable for the optimisation of your houses by integrating fire and burglary alarms, video intercom and a front door which can be opened using a remote control. You can also set up a virtual housekeeper service with VieDome. As almost all communication within VieDome is wireless, it requires little construction work in existing buildings. Naturally, VieDome is extremely suitable for application in new projects.

Just make a quick video communication with friends in Australia

The couple has time left over for fun activities such as visiting a theatre or museum

One of the services VieDome has enabled: the shopping service

VieDome by TKH Care Solutions has proven itself as a platform with which care and welfare organisations, housing corporations, municipalities and other care providers can offer their services to clients and residents in an accessible way. VieDome facilitates the supply of convenience, comfort and care services, from its own organisation as well as from joint initiatives. The VieDome platform uses open standards with which connections are easily realised. This creates an open, yet secure, platform for providers of care, services and technology. Optimal freedom of choice for residents, more efficient care and added attention for clients has always been crucial for VieDome.

VieDome was developed by TKH Care Solutions, which provides the hard and software and plays an important role in the development of new services and concepts.

Would you like to learn more about what VieDome has to offer?
